

Complex DOJ Fraud Case Advances With Help From Casepoint Experts

Summary

See how Casepoint complements an AM Law 100 firm's in-house eDiscovery software delivering powerful cloud collections, ECA, and processing.

What Was the Business Challenge?

It was two-fold. Firstly, the production data provided by the DOJ lacked common data fields. Secondly, the joint defense team sought to reduce the 12TB of data collected, including almost 8.5M documents, to a reasonable and relevant review size.

Shared access and cost meets multinational and multilingual case support.

Client Profile

- Key players from a large federal contracting firm with 1,600+ employees and over \$100M in revenue, each with diverse legal representation

Case Profile

- 12TB of data
- Over 8.5M documents
- Unique elements: DOJ litigating against several individuals who each retained their own counsel

Impact

- Fast turnaround with an initial 6TB of data processed in just six days
- 8.5M documents culled to a potentially relevant set of 2M
- Shared costs across the joint defense teams kept budgets manageable

How Did Casepoint Deliver?

With insight and decisive impact. On initially reviewing the production data provided by the DOJ, it became clear that the data needed re-processing so that metadata could be extracted from their collected native data. Using Big Data analytics, Casepoint processed the data in an astonishing six days, then filtered and culled it for review and eventual production. The ultimate outcome? A successful defense for the client and their litigation terms.
