

Migration Expertise Is Built Into Casepoint

You can move from a legacy provider to a unified, secure platform efficiently. See why Casepoint is trusted by government agencies and enterprises to handle migrations of any scale.

Casepoint has migrated hundreds of terabytes of data from legacy platforms. That's true for projects spanning eDiscovery, legal hold, FOIA, and other migration types.

These results reflect how Casepoint partners with customers to move complex migrations forward.

Major U.S. Federal Regulatory Agency

375 TB Migrated From a Legacy System

Now supports 2,000+ users and hosts about 1.5 PB of data.

“Casepoint has been the best service provider we’ve ever worked with.”

Legal team for the Fortune 100 defense contractor

Experience Migrating From

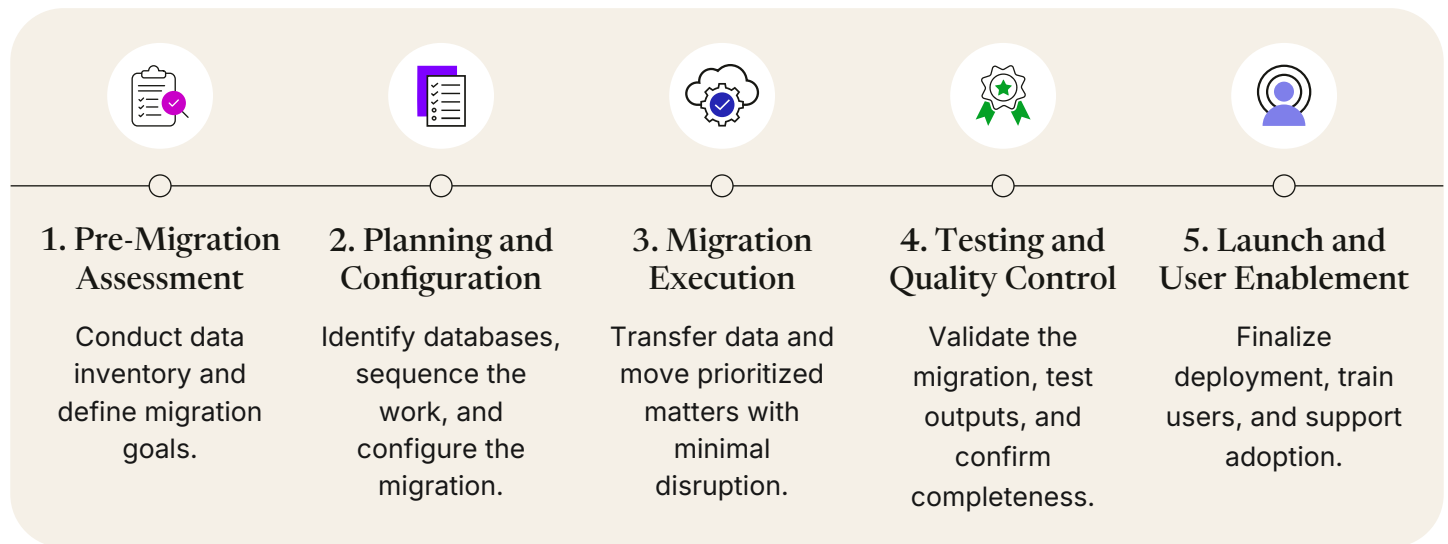

OpenText | Relativity | Clearwell/Veritas | Zapproved/Exterro | Internally Developed Tools | Other Legacy Systems

How Casepoint Reduces Migration Risk

Poorly executed migrations can disrupt active matters and lead to loss of work product or metadata. Even user change management and training have to be considered to ensure migrations run smoothly.

Migration Process

A proven migration playbook and proprietary tools help Casepoint execute complex migrations with less risk and disruption.

Dedicated Migration Team

Project Manager: Primary point of contact overseeing the migration and implementation.

Migration Manager: Coordinates day-to-day migration planning, execution, and support.

Data Analysts: Execute the migration and manage data movement.

Quality Control Analysts: Validate completeness and accuracy to help ensure no data loss.

Client Services Team: Provides cross-functional expertise, backup support, and continuous coverage.

Move from legacy systems with less risk and disruption on a secure, unified platform.
