

IQ Agents

Agentic AI. Defensible by Design.

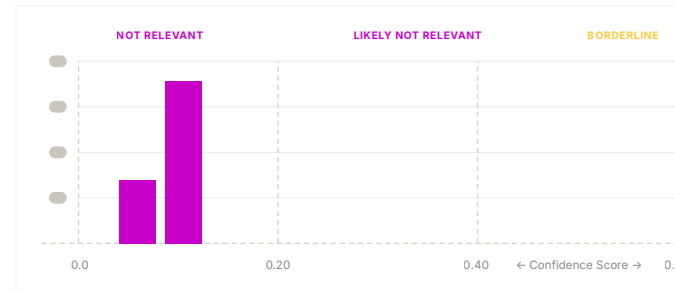

IQ Agents bring a proprietary multi-model process to government, legal, and compliance workflows by cross-checking outputs, proving quality on a sample before scaling, and logging every human and AI decision along the way, so every result holds up under scrutiny.

Built for the Government, Legal, and Compliance Teams

Government, legal, and compliance teams can't afford to have an AI decision challenged after the fact — a call no one can explain, an error that surfaces only once it's already run at full scale. IQ Agents are built for that bar: a guided workflow where your team sets the criteria, validates quality on a sample, and confirms results before the agent executes at scale.

Meet the Agents

Relevance Determination Agent

Is This Document Relevant or Responsive?

Determine relevance or responsiveness based on matter-specific criteria.

See the rationale and relevance likelihood score for each document.

Track recall and precision throughout the review.

Preserve a record of human and AI decisions.

Validate sample results before approving a full run.

Issue Coding Agent

What Issues Does This Document Raise?

Evaluate documents against defined legal, factual, or investigative issues.

Code documents for issues specific to your matter.

Review sample results to assess performance and accuracy.

Approve the agent's progression to the full document set.

Use optional post-run quality control to calculate final recall and precision for each issue code.

What Sets IQ Agents Apart

Guaranteed Accuracy

Validates quality on a sample set before full execution; multiple AI models cross-check every output.

Defensible and Transparent

Logs every AI and human decision with supporting rationale, backed by recall and precision metrics.

Human Governance Built In

Keeps reviewers in control, requiring their approval before the agent proceeds across the full set.

ROI Visibility Upfront

Shows estimated time and cost before the run, so teams commit resources with full visibility.

Discover What IQ Agents Can Do

Casepoint's Relevance Determination Agent and Issue Coding Agent bring cross-checked, human-approved AI to early case assessment and document review.
