

IQ Assist | Powered by Casepoint IQ™

AI That Holds Up Under Scrutiny

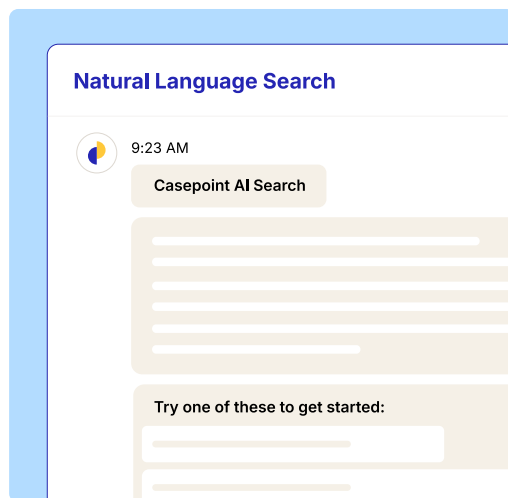

Legal, compliance, and FOIA teams are drowning in data they can't move through fast enough. Mixed file types, unstructured records, and requests are piling up faster than staff can answer them. Every hour spent hunting for the right document is an hour not spent on strategy, response, or resolution.

IQ Assist is the assistive AI layer of Casepoint IQ, built for legal, compliance, and FOIA teams. Privately deployed LLMs, evidence-based responses, and transparency logs back every answer.

For Legal and Compliance Teams in Government and Enterprise

IQ Assist meets each team where the work happens. For legal and compliance teams, the AI capabilities to search, summary and classify in natural language reduces the time spent hunting for the right file.

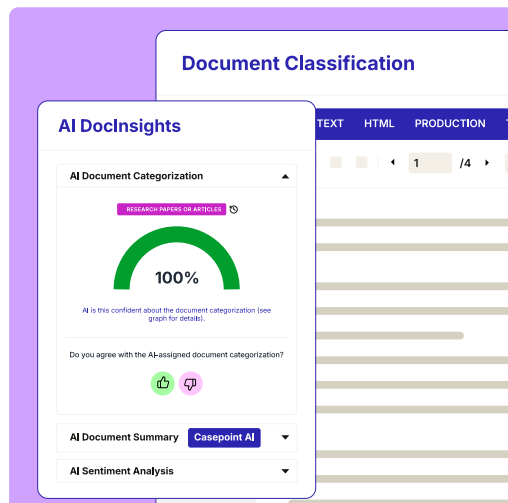

Natural Language Search

Stop losing time to query syntax. Ask questions in plain language and get precise, AI-generated answers back immediately.

Document Summarization

Spend your time on judgment calls, not skimming. Contracts, depositions, and financial records get summarized instantly, so reviewers see what matters first.

Document Classification

Skip the manual sorting. Mixed document types are automatically organized into categories, ready for review.

Intelligent Search

Find the record that matters, not just a pile of matches. Text search, field search, and analytics combine for sharper, more targeted results.

For FOIA and Public Records Teams

For FOIA and public records teams, IQ Assist answers requester questions directly and helps requesters submit complete requests the first time.

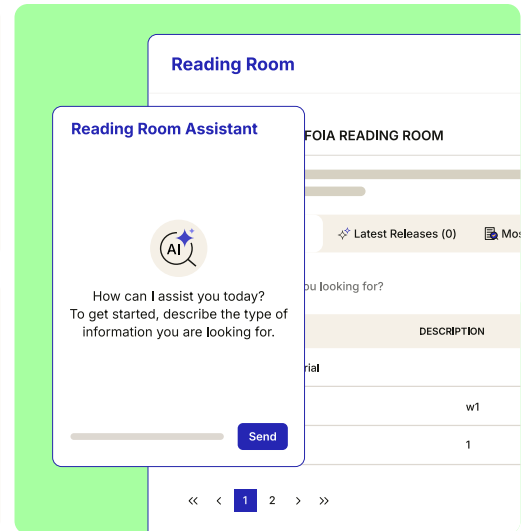

FOIA Reading Room Assistant

Fewer requests land on your desk. Requesters get direct answers from the reading room and other approved sources before they ever file.

FOIA Request Writing Assistant

Less back-and-forth, more requests resolved the first time. Requesters are guided to submit complete, proper requests up front.

Results Powered by IQ Assist
