Top 7 Reasons Why Enterprises Select Casepoint for Slack Collections

Casepoint and Slack Partnership Streamlines Collections

Casepoint and Slack have partnered to eliminate the middle-man in data collection for Slack eDiscovery needs; no more export and import steps necessary, you define the Slack data you need and import it directly to your matter's workspace. Here are the top 7 reasons Casepoint is selected for Slack collections for investigations, litigation, subpoenas, and FOIA/public record requests.

Casepoint streamlines Slack data collections for legal discovery workflows. Enjoy faster preservation and collections of Slack data while decreasing risk of spoliation or missed data.

Reduce Costs

Eliminate the cost and risk of 3rd party Slack collection tools that require data to be collected, transferred (risk), ingested, and reprocessed. Slack collections is built into Casepoint.

1

Greater Efficiency

Casepoint allows you to seamlessly collect, ingest, process, and quickly begin review your Slack data in our secure end-to-end platform. This saves time, cuts costs, and creates a more streamlined eDiscovery workflow.

2

Fast Collections

Casepoint's Slack collections and processing capability is one of the fastest and most thorough tools in the market.

3

Granular Filtering

Casepoint enables you to filter your data at a granular level based on the extensive metadata that we are able to collect, allowing you to find what you need with ease.

4

"Exceptional" Reporting

Casepoint's reporting capabilities provide helpful information such as our data exception reports to better understand and overcome data challenges.

5

Make Review Easy

Casepoint's ChatViewer allows in-house and/or outside counsel to review Slack conversations and chats with ease and provides the ability to interact with filters, ultimately reducing review time and removing friction from reviewing large data sets.

6

Accredited

Casepoint is an **official Slack partner.**

7

Organizations that use Casepoint's Slack integration will be able to:

Target specific Slack channels for collection, decreasing costs associated with over-collection.

Identify all Slack channels a user is associated with and perform one collection for the set.

Collect both public and private channels.

Channel collections include edited and deleted messages.

Attachments are collected and kept within standard parent-child relationships to streamline the review process.

Channel reactions and emojis are included with the collection.

Third party Slack accounts are available and collectable.

Content from all parties within shared channels are collectable.

Channel communication may be threaded and divided based on custom configurations.

Collect Data With Ease. Pull What You Need.

Your legal team never has to leave Casepoint. Use the Casepoint interface to collect only the data you want from your entire Slack environment.

Collect Data with Ease
